Description

01 External finishing corner profile is recommended for the protection and finishing of the external edges of terraces and balconies (100 x 100 mm). 02 Junction finishing profile is recommended for the protection and finishing of the external edges of terraces and balconies.

Material

Used as protection and finishing of junction points and external corners of terraces and balconies, thus protecting the edges of the

flooring tiles. The particular section also allows the use to protect the edges of steps or pavements by hiding the junction between the tread and the riser.

Use

Made of painted grey (RAL 7038) Aluminum-Magnesium-Silicon alloy and antique grey.
