Description

End caps, block system (anchor bracket) and gasket for channel.

Material

PP for the end caps and pipe connection, PE-HD (high density polyethylene) for the block system and rubber gasket for the rounded connection.

Use

The end caps and the bulkheads are used as terminals for the channel, the block system is used to block the grating inside the channel (following European Regulation EN 1433). Junction ø 110, together with the rubber gasket, converts the lower exit from ø 100 to ø 110 mm.
