Code	Commercial Description	Dimensions	Conf.	Pallet	Selling Unit
INS04-70010	PROGUARD ULTRA construction sheet for outdoor appl...	2.000 x 1.200 x 12,5 mm		120	M2

Description

Proguard Ultra is a plasterboard and fiberglass panel that meets the onerous requirements of an exterior coat. It is designed for exterior insulating finish systems (EIFS), such as under brick veneer, marble cladding, cladding systems, porcelain tile and conventional stucco or direct plaster. The reinforced core minimizes the potential for warping, sagging and rippling, while the fire-resistant additives, create an incombustible cladding panel. Panels are installed vertically using standard mechanical fasteners to ensure the rigidity and fire resistance of wall and ceiling systems.

Material

Made of enriched gypsum and covered with polyester-glass fiber fabric.

Use

Used for the construction of: exterior walls, counterwalls and false ceilings; finishing systems for exterior insulation; solid brick or stone finishes; Interior finishes that require a backing board with superior fire and moisture resistance; and
