

HEAVY FIBER GLASS MESH FOR PLASTER

Code	Commercial Description	Dimensions	Conf.	Pallet	Selling Unit
RET01-1019	Heavy fiber glass mesh for plaster	1,00 x 50	50	1000	0

Description

Fiberglass mesh for plaster. Purple colour (identification code R162, corresponding to the weight in sqm of pure fiber mesh without coating.) Dimensions available: h. 1,00 x 50m. Packed in rolls.

Material

Made of e-glass fiber, with an axle spacing of 7,0 x 6,5 mm and weight of about 200 gr/m2.

Use

Used to reinforce the skim coating layer applied to insulating panels of the coat system. The high grammage gives the mesh a higher mechanical resistance and it makes the product suitable for the reinforcement of the part of the wall most affected by mechanical shocks.
